

Peyronie's - Penile Curvature

We see an increasing number of men with penile curvature, or Peyronie's disease. Viewers of Embarrassing Bodies on tv may be familiar with this condition. Scar tissue forms on the corpora cavernosa (the penile cylinders responsible for erection) which causes a fulcrum for the curvature. The curvature can be such that intercourse is difficult or impossible, and erectile dysfunction can also be a problem.

We offer surgery for treatment of Peyronies disease. In the near future we hope to offer injection treatment, a promising less invasive technique.
